

SonicView IP recording now supports IPitomy PBX's

February 15, 2010; Beaverton, OR; Sarasota, FL

TriVium Systems, Inc., a leading provider of Business Productivity solutions including Call recording, Call reporting and E9-1-1 Security Application Suite, and IPitomy, provider of “all in one” business communication platform, today announced the release of SonicView IP recording for IPitomy platforms.

“IPitomy is pleased to be partnering with Trivium on a complete call accounting and call recording application” says Nick Branica, founder of IPitomy, “ Trivium has a proven track record of providing industry leading telecommunications applications that are easy to use and cost effective.”

SonicView offers state-of-the art web based User Interface for searching and playing back the call recordings. The software only solution provides extensive search filters including date / time, duration, caller id, dialed number, extension and much more. SonicView provides advanced features like annotation of calls, On-Demand recording and much more. Learn more about the product at www.triviumsys.com.

“We identify IPitomy not only as an emerging player, but also a forward looking manufacturer in the IP PBX market. We are excited to release SonicView on IPitomy – a pure IP platform. I am very confident that SonicView IP recorder will add a lot of value to what IPitomy already offers” said Mr. Mathews Manaloor, President & CEO of TriVium Systems, Inc.
