

Some Things Are Just Too Cool

Introducing IPitomy VIP

IPitomy is keeping the tradition of the DSS Console alive with VIP. IPitomy VIP is like a DSS Console on Steroids. Aside from doing everything the typical DSS can do, VIP has a much richer call control ability, manages presence status of all users and provides advanced management control for supervisors and call center managers.

VIP is not just the receptionist's best friend. Everyone is going to want one. It takes up very little desk space, is fully customizable for monitoring just the extensions you want to monitor and provides full visibility into the activity of all users.

Think of VIP as a visual company directory where you can see at a glance the status of any user or group of users. Right click on the extension for a drop down menu to

call, transfer, transfer to voicemail, page and pickup extensions. Clicking a mouse is so much nicer than pressing a button.

VIP is a color display for IPitomy Desktop Call Manager the industry leading Call Management application. DCM provides a rich user experience with a simple to use user interface that is far more productive than the old "See Light - Press Button" systems of the past. DCM allows managers to monitor calls, record calls and whisper to employees - providing coaching and quality assurance.

Here is a quote from an IPitomy Dealer - "This new small USB display is awesome! I don't know why we didn't think of this before! Perfect size and very high tech. I will be showing it to 2 customers this week. I am going to include one with every sale. I can't help but believe if one person gets it many will want it. even if they buy it themselves it will help drive sales when their business buddies see it."

The most suprising thing about VIP is the price, \$159.00, dealer cost. That's about the same price of a DSS Console; but it does so much more.
